## **‘Total Energy’ – Energy efficient food chilling and freezing plant**

- **Most large scale food production passes through a spiral or tunnel freezer**
- **Most processes first heat then cool the product**
- **Most factories do not conserve extracted heat**
- **Most factories complain of high energy costs and low margins**

**For spiral freezer read, chiller, tunnel, blast.....**

- 1. Know the effect of temperature and air velocity on retention time and base load power e.g. fans**
- 2. Know the effect of belt and rack loading on air velocity (and hence retention time) and absorbed power**
- 3. Know the effect of air direction on retention time and other losses such as moisture**
- 4. Know the effect of frost build-up on coils**
- 5. Know the cost of defrost (lost production, energy, services, lead-in-time etc)**

# Spiral Freezer Setup - Examples

## **Spiral A:**

**Open trays of Mash potato**

**Capacity = 1000Kg/hr**

**Vertical Air Down**

**Open Belt Air Speed = 3m/s**

***Belt loading 50%***

***Actual Belt Air Speed = 6m/s***

***Retention time = 40 mins***

**Ave. Air temp = -7C**

**Absorbed Fan Power = 36kW**

**Absorbed Comp. P = 40kW**

**Run duration = 5\*16hrs/week**

**Cost per Kg = £0.0080/Kg**

**Production per week = 80T**

**Cost per week = £608**

## **Spiral A:**

**Open trays of Mash potato**

**Capacity = 1000Kg/hr**

**Vertical Air Down**

**Open Belt Air Speed = 3m/s**

***Belt loading 40%***

***Actual Belt Air Speed = 5m/s***

***Retention time = 32 mins***

**Ave. Air temp = -14C**

**Absorbed Fan Power = 34kW**

**Absorbed Comp. P = 52kW**

**Run duration = 5\*16hrs/week**

**Cost per Kg = £0.0086/Kg**

**Production per week = 80T**

**Cost per week = £689**

**+13%**

# Spiral Freezer Setup - Examples

## **Spiral A:**

**Open trays of Mash potato**

**Capacity = 1000Kg/hr**

**Vertical Air Down**

**Open Belt Air Speed = 3m/s**

***Belt loading 50%***

***Actual Belt Air Speed = 6m/s***

***Retention time = 40 mins***

**Ave. Air temp = -7C**

**Absorbed Fan Power = 36kW**

**Absorbed Comp. P = 40kW**

**Run duration = 5\*16hrs/week**

**Cost per Kg = £0.0076/Kg**

**Production per week = 80T**

**Cost per week = £608**

**Moisture loss = 4% = 3200Kg**

## **Spiral A:**

**Open trays of Mash potato**

**Capacity = 1000Kg/hr**

**Vertical Air Up**

**Open Belt Air Speed = 3m/s**

***Belt loading 50%***

***Actual Belt Air Speed = 6m/s***

***Retention time = 40 mins***

**Ave. Air temp = -7.7C**

**Absorbed Fan Power = 36kW**

**Absorbed Comp. P = 42kW**

**Run duration = 5\*16hrs/week**

**Cost per Kg = £0.0086/Kg**

**Production per week = 80T**

**Cost per week = £624**

**Moisture loss = 1.5% = 1200Kg**

# Spiral Freezer Heat Recovery

**Spiral A:  
Open trays of Mash potato**

**Absorbed Comp. P = 40kW  
Heat of Rejection 150kW  
Run duration = 5\*16hrs/week**

**Cost of Gas (4p/kWh)= £6/hr**

**Spiral A:  
Open trays of Mash potato**

**Absorbed Comp. P = 60kW  
Heat of Rejection 165kW  
Run duration = 5\*16hrs/week**

**Extra Elect(10p/kWh)= £2/hr**

**To deliver water at 60°C**

**Renewable Heat Incentives of  
1.5p/kWh = £2.47/hr**

**Net saving of £6.47/hr  
= £518/wk**

# How to lower £/Kg cost

	Typical Spiral	Better Spiral	Best Spiral
Qty	80T/wk	80T/wk	80T/wk
Elec –	£689	£608	£624
Lost H <sub>2</sub> O	3200Kg	1200Kg	1200Kg
Heat	£480	£480	£160
Incent.	£0	£0	£197
	<b>£1169/ wk</b>	<b>£1088</b>	<b>£587</b>
		<b>+2400Kg mash</b>	<b>+2400Kg mash</b>

- One to watch.....

- Transcritical cycle allows water heating 15°C to 65°C
- Compressors quite small (40kW chill at 12/7°C)
- Danger that COPs are allowed to fall with zero heat recovery (zero gain)
- Very suited to sensitive areas (intolerance of R717)

- Small CO<sub>2</sub> Heat pump,
  - 46kW Cooling 12/7°C
  - 14kW Power
  - 60kW Heating 15/60°C

- Typical Chiller
  - 46kW Cooling 12/7°C
  - 7kW Power
  - 53kW Heating 15/20°C

# Parting thoughts.....

•Whether a large multi-megawatt heat pump like this.....

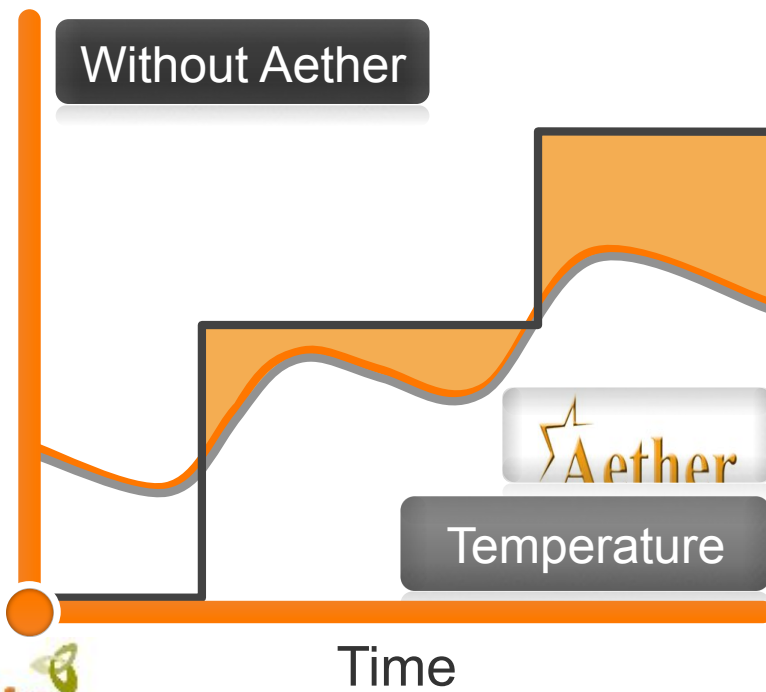

•Or a small CO<sub>2</sub> freezing system like this .....  
optimise the freezing costs, remember the product value and  
don't forget the waste heat- it is valuable stuff
